EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mr. John L. Rogitz on 12/18/2006.

The application has been amended claims 1 and 16 as follows:

1. (Currently amended) A data bit counter having a width "w", comprising:

at least w counter stages, each stage receiving at least one carry bit, and at least one count bit, each stage executing logic on the count bit and carry bit to output at least one count bit and at least one carry bit to a next highest stage, the count bits output by the stages together representing a Gray counter count value, wherein, an n^{th} count bit has a value of $\text{gcount}(n)'$ after an active clock edge associated with the counter, and the logic includes determining $\text{gcount}(n)'$ using an XOR of a current count bit and (an output of AND of a previous count bit and a previous carry bit).

16. (Currently amended) A logic device executing method acts for counting a number of bits processed, the method acts comprising:

generating a carry bit chain useful for determining which, if any, higher order bits should change in a next clock cycle;

generating a count bit chain, the chains being dependent on each other; and using the count bit chain to indicate a count of a number of bits, the device including a Gray code counter using the chains, wherein the counter has a width "w" and includes at least w counter, each stage receiving at least one carry bit, and at least one count bit, each stage executing logic on the count bit and carry bit to output at least one count bit and at least one carry bit to a next highest stage, the count bits output by the stages together representing a Gray counter count value further wherein an n^{th} count bit has a value of $\text{gcount}(n)'$ after an active clock edge associated with the counter, and the logic includes determining $\text{gcount}(n)'$ using an XOR of a current count bit and (an output of AND of a previous count bit and a previous carry bit).

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Chat C. Do whose telephone number is (571) 272-3721. The examiner can normally be reached on 7:00AM to 5:00PM M-Th.
